digital safe-deposit box

FORTLAX IT - Safest online storage in Sweden

A *digital safe-deposit box* makes it easy to protect and preserve your digital assets. The digital material is kept safe within a vault inside a fort with highest physical and digital security.

The *digital safe-deposit box* is always available, day and night, no matter where you are. With Fortlax IT's *digital safe-deposit box* secure storage system you can afford the additional protection you need for your company. You choose what to preserve; for instance accountancy, register of clients, source codes, documents, pictures, systems data and other important company information.

As a backup-solution you receive a very cost-efficient alternative which is extremely safe and uncomplicated. The need of an expensive investment is eliminated and your own operating personnel are relieved from complicated procedures like exchange of tape data carriers.

digital safe-deposit box

With a digital safe-deposit box Fortlax IT offer a secure preservation for the future. You can store your digital assets far longer than the ten years regulated by the Swedish accountant law. This is guaranteed by a very professional computer environment, knowledge about long-term preservation and methods of migration. Migration means that your digital safe-deposit box follows the technological development and is continuously updated without operational disturbances.

The *digital safe-deposit box* includes the following services:

- ✓ **Secure Preservation.** A well protected long-term storage for preservation of digital material which is easy to use and accessible wherever you may be in the world.
- ✓ **Physical security.** The digital safe deposit box is located within a vault inside a military fort. The fort is one of the safest buildings in Europe and is fully operational in total isolation for 6 months.
- ✓ **Operation- and computer data security.** The computer equipment is first-rate and fully redundant and replacable during operation in order to meet our high standards. Auxiliary power supply is provided by two diesel units, each one with a capacity of 325 KVA. An UPS on 60 KVA guarantees an uninterrupted power supply. The server environment is first-rate with cooling and emergency cooling. All communication is safe using strongest encryption.
- ✓ **Workplace in reserve.** It is possible to arrange a workplace at the premises of Fortlax IT if your company or equipment becomes incapacitated due to fire or any other type of accident.
- ✓ **Digital safe-deposit box surveillance.** Surveillance of automatic storage execution and scheduling of sample restoration.
- ✓ **Professional help and support.**

digital safe-deposit box - Services

Digital safe-deposit box Starter pack**Price: 995 kr**

The starter pack helps you, on location, to plan and commence the preservation of your company's digital assets. Fortlax IT assists in inventorying and planning the preservation and to install and schedule potential backups. This service includes 1,5 hours of work and a total travelling distance of 100 km. Any work and travelling distance beyond this renders additional costs. *Digital safe-deposit box Starter pack is very useful for small- and medium-sized companies in need of strategic IT-support and technical facilities.*

Digital safe-deposit box Backup**Price: 795 kr**

A very good, economical and user friendly program for advanced and automatic backup.

Digital safe-deposit box Client**Price: 595 kr**

An easy to use client which is used as an ordinary hard disk. Very useful for dynamically working towards and monitoring the digital safe-deposit box. *In addition to the digital safe-deposit box Client many other easier SFTP-clients are obtainable. (More information on the support web-site).*

Digital safe-deposit box Surveillance**Price: Included**

A surveillance service to guarantee that every scheduled automatic execution is carried out correctly. You can concentrate yourself upon your business while Fortlax IT monitors your digital assets and make sure they are properly preserved. Fortlax IT has no access to the stored data and only takes part of sent information about status. If a divergence occurs, Fortlax IT will contact you in order to swiftly solve the possible problem. Every six months your company is requested to do a sample restore (consultation, with additional charge, can be received if required).

Konsultation**Price: 695 kr / hour**

Fortlax IT is experienced and professional within the areas of backup, maintenance, long-time preservation, data processing, computer development and programming. We offer consultation within these areas and every linked service.

Field of application

The digital safe-deposit box is based on standards and is not restricted to separate services. Our clients use their digital safe-deposit boxes to backup, third backup, digital archives, dynamic working areas and as central storage for travelling salesmen.

Digital assets to preserve can be documents, source codes, accountancy data, system data and digital pictures.

Who can use this service?

Essentially every company with a computer system have a need of storing important data.

The digital safe-deposit box has been designed to meet the demands set by small- and medium-sized companies but it is also suitable for bigger corporations in need for a third backup among other things.

Communication

Because of close cooperation between net owners we can offer excellent communications. If required we can offer dedicated fibre /VLAN.

Co-location

Fortlax IT can also offer highly professional and secured co-locations for your company's server and computer environments.

If your company needs a larger facility it is possible to rent a whole room for your server.

Please contact our sales-department for additional information.
